

OFFICIAL CORPORATE DOCUMENT

Company Profile & Executive Overview

— Where Logic Meets Innovation —

Full-Stack Engineering

Next.js · React · TypeScript · FastAPI · PostgreSQL

Autonomous AI Workflows

LLM orchestration · RAG pipelines · MCP systems

Robotic Process Automation

Playwright headless bots at computational speed

Transparent Pricing

Published rates. Free working prototype before any payment commitment.

Engineering-First Culture

The founder writes production code personally on every client project.

Deterministic AI

Strictly typed scaffolding enforced around every probabilistic LLM call.

8+

Platforms

Omni-channel autonomous publishing engine

100%

Custom-Built

No templates. Every pixel engineered from scratch.

₹8,999

Starting From

Digital Launch package — live in 4 weeks

COMPANY

Logic Intelligence Technologies

FOUNDER

Vikash Saravanan

LOCATION

Coimbatore, Tamil Nadu, India

WEBSITE

SECTION 01

Executive Overview

Logic Intelligence Technologies (LIT) is a premium digital engineering firm founded in Coimbatore, Tamil Nadu. We build autonomous software ecosystems — not websites. From full-stack web applications to Robotic Process Automation pipelines and Large Language Model integrations, we engineer systems that act as digital workforces for our enterprise clients. Our philosophy is engineering-first: the founder writes production code on every project, and every system is backed by strictly deterministic architecture, typed APIs, and production-grade security.

MISSION STATEMENT

To architect deterministic, robust software ecosystems and autonomous AI workflows that empower enterprises to scale operationally without proportionally scaling their headcount — delivered transparently, on time, and at honest prices.

VISION STATEMENT

To become South India's definitive autonomous intelligence firm — where every client workflow is powered by self-operating AI pipelines, zero-overhead deployments, and logic-driven engineering that sets a new global standard for digital operations.

"We do not build websites; we build digital workforces. Engineering is the product — the interface is merely the proof."

Vikash Saravanan · Founder & Lead Engineer

CORE ENGINEERING PHILOSOPHY

- ◆ **Deterministic Scaffolding over Brittle Prompts**
AI must be a controlled component within a strictly typed system. We use structured JSON outputs, Pydantic validation, and robust error handling — never wild-card prompts running unsupervised in production.
- ◆ **Uncompromising UI/UX Precision**
We adhere to a premium, dark-mode aesthetic. Interfaces are built to be ruthless in functionality and surgical in their visual execution. Every component is intentional, accessible, and production-hardened.
- ◆ **Security at the Foundation**
From Row Level Security (RLS) in Supabase clusters to encrypted API orchestration and environment-variable-only secrets management, data integrity is non-negotiable on every project we deliver.
- ◆ **Engineering Rigor over AI Hype**
We treat AI as a probabilistic component guarded by deterministic scaffolding and strict validation layers. This architecture produces reliable software — not impressive demos that break in production.
- ◆ **Transparent Client Partnership**
Pricing is published on our website. A free working prototype is delivered before any payment commitment. Scope is written and signed before a single line of production code is written.

SECTION 02

Core Capabilities

- 1

A · Full-Stack Web Application Architecture

We engineer data-intensive web platforms using React and Next.js with hybrid rendering strategies — Server-Side Rendering for dynamic data and Static Site Generation for sub-100ms load times. Every frontend is backed by a secure FastAPI or Node.js backend, connected to a hardened PostgreSQL database on Supabase with Row Level Security enforced at the SQL layer.
- 2

B · Autonomous Workflow & Robotic Process Automation

Using Python and Playwright, we architect headless browser bots that navigate web interfaces identically to human users — at computational speeds. From our proprietary Omni-Apply architecture to multi-platform publishing engines, we automate workflows that competitors claim are impossible to automate. If a human clicks it repeatedly, a LIT bot should handle it automatically.
- 3

C · AI & Large Language Model Orchestration

We integrate Claude, Grok, and OpenAI APIs into backend services via strictly constrained system prompts and JSON schema enforcement. We build Retrieval-Augmented Generation (RAG) pipelines, context-aware decision engines, and DOM-parsing AI agents that read, reason, and act on live data — all within deterministic, typed scaffolding frameworks.
- 4

D · Scalable Database & Cloud Infrastructure Engineering

PostgreSQL schema design, Supabase Row Level Security implementation, real-time subscriptions, and edge function deployment form the backbone of every LIT application. We deploy to Vercel and AWS edge networks, configure CI/CD pipelines via GitHub Actions, and manage environment variables and secrets with production-grade discipline.

INDUSTRY APPLICATIONS

Healthcare Technology

Secure patient management systems with HIPAA-aligned RLS policies.

E-Commerce & Retail

Inventory forecasting, price monitoring, and AI support routing.

Enterprise Internal Operations

Custom ERP integrations and automated auditing bot deployments.

EdTech & Academic Platforms

Automated grading pipelines and student portal integrations.

SECTION 03

VIKASH SARAVANAN

Founder & Lead Engineer

B.Tech AI & Data Science · Rathinam Technical Campus, Coimbatore

Vikash Saravanan's engineering philosophy was forged through competitive development and hands-on execution of complex software systems. His pedigree is validated by real-world, high-complexity builds — from global Meta PyTorch Hackathon submissions to open-source health-tech infrastructure serving real users. Vikash rejects superficial AI trends in favour of hard-coded, deterministic software engineering that produces measurable, reliable outcomes for enterprise clients. He writes production code on every single LIT engagement.

ENGINEERING PORTFOLIO HIGHLIGHTS

- ◆ **OpenEnv-Debugger**

Meta PyTorch Hackathon Submission

A Python-based CLI tool using AI to parse complex error logs and autonomously resolve PyTorch environment conflicts for ML engineers. Demonstrates LIT's core philosophy: deterministic software harnessing probabilistic AI for real outcomes.
- ◆ **HearWise Child Health**

Full-Stack Healthcare Platform

End-to-end development of a highly secure, relational database-driven health application deployed on Vercel and Supabase. Features complex RLS policies protecting pediatric PII and a responsive Next.js dashboard for practitioners.
- ◆ **Omni-Apply RPA**

Autonomous Job Application Bot Architecture

Ongoing development of an autonomous bot using DOM-scraping, Playwright, and LLM APIs to dynamically navigate and auto-complete complex web portals at scale. Demonstrates parallel multi-portal execution without human intervention.
