

CONFIDENTIAL STRATEGIC INVESTMENT OVERVIEW

Investor Information Memorandum

— Engineering intelligence. Scaling autonomously. —

Full-Stack Engineering

Next.js · React · TypeScript ·
FastAPI · PostgreSQL

Autonomous AI Workflows

LLM orchestration · RAG
pipelines · MCP systems

Robotic Process Automation

Playwright headless bots at
computational speed

Transparent Pricing

Published rates. Free working
prototype before any payment
commitment.

Engineering-First Culture

The founder writes production
code personally on every client
project.

Deterministic AI

Strictly typed scaffolding
enforced around every
probabilistic LLM call.

SECTION 12.1

The Market Bottleneck & Opportunity

Global enterprises are experiencing SaaS Fatigue. They pay for dozens of specialised software tools, yet these tools do not integrate organically. Furthermore, the explosion of Generative AI has produced thousands of fragile wrapper startups that offer no defensible technical moat and break when the AI hallucinates. The market desperately needs rigorous Systems Integration and Robotic Process Automation. Companies will pay a significant premium for engineering agencies that can securely connect existing databases to deterministic AI workflows using headless browser automation and strict backend routing. This is precisely the capability gap that LIT was built to fill. Visit logicintelligencetechnologies.in for current service offerings.

MARKET SIZE & GROWTH INDICATORS

SECTION 12.2

The LIT Technical Moat

◆ Deterministic Software Engineering Outputs

LIT uses strict JSON schemas, Python typed APIs, and Next.js TypeScript to ensure AI behaves predictably within every system we build. This engineering discipline is our primary differentiator in a market flooded with chatbot wrappers that break whenever the AI model changes its output format.

◆ Playwright RPA Supremacy — Where APIs End, LIT Continues

When modern APIs do not exist, our headless browser bots succeed where competitors fail. We can automate workflows on legacy systems that predate modern API standards, giving us access to enterprise clients no competitor can serve without full system replacement at 100x the cost.

◆ End-to-End Architecture Ownership

LIT controls the entire technology stack — from Supabase RLS database policies to Vercel edge deployment. This vertical ownership enables faster debugging, tighter security, superior margins, and single-point accountability that distributed agency models structurally cannot provide.

SECTION 12.3

Business Model, Unit Economics & Pricing

LIT OPERATES ON A HIGH-TICKET HYBRID B2B MODEL DESIGNED FOR MAXIMUM LIFETIME VALUE

Tier 1 Custom Architecture Builds High-ticket, fixed-scope development of custom web applications and RPA scripts. ₹50,000 – ₹5,00,000+ Per Project · High Margin · One-time logicintelligencetechnologies.in	Tier 2 AI Infrastructure Retainers Monthly Recurring Revenue contracts for ongoing maintenance, LLM updates, and script monitoring. ₹25,000 – ₹2,50,000+ Per Month · Recurring MRR · Ongoing logicintelligencetechnologies.in	Tier 3 SaaS Productisation (Future) Transitioning internal tools (Omni-Apply, publisher engine) into subscription SaaS products. Target ₹2,500 – ₹25,000 Per Month · Scalable ARR · Subscription logicintelligencetechnologies.in
--	--	--

SECTION 12.4

Go-To-Market & Growth Strategy

LIT leverages its deep technical expertise, open-source pedigree (HearWise), hackathon accolades (Meta PyTorch), and highly technical, data-driven marketing strategy to establish absolute market authority. Technical content marketing on LinkedIn and GitHub drives inbound leads from engineering decision-makers, founders, and enterprise procurement teams.

- ◆ **Phase 2 • Autonomous Outbound Engine**
Utilising LIT's own Playwright and Python bots to scrape verified enterprise leads, parse their tech stacks from LinkedIn and job postings, and auto-generate hyper-personalised outbound email campaigns at mass scale — demonstrating our product capabilities through the outbound process itself.
- ◆ **Phase 3 • Strategic Partnership Network**
Aligning with B2B tech consultancies and regional enterprise hubs in Coimbatore's growing tech corridor to act as a dedicated, white-label AI engineering arm. This channel delivers recurring contract revenue without direct sales overhead and enables exponential delivery capacity scaling.

Financial & Operational Roadmap

Capital allocation strategy as LIT scales from boutique engineering agency to autonomous enterprise firm.

Priority 01

Cloud Infrastructure & API Compute

AWS, Vercel Pro, and Anthropic API compute overhead. As automation scales, compute costs scale sub-linearly, driving margin expansion. All infrastructure choices prioritise serverless architecture to maintain low fixed overhead costs.

Priority 02

Elite Specialised Engineering Talent

Acquiring senior Data Scientists and Next.js UI engineers to expand delivery capacity without compromising the engineering standard. Remote-first hiring expands the talent pool globally beyond the Coimbatore base of operations.

Priority 03

R&D: Autonomous Agent Frameworks

Investment into proprietary DOM-parsing algorithms and multi-agent LLM orchestration frameworks. This R&D directly strengthens the technical moat and enables the Tier 3 SaaS productisation roadmap within 18 months.

INVESTMENT ENQUIRIES

Logic Intelligence Technologies welcomes strategic investment partners who understand the value of deterministic AI engineering. We are building infrastructure that scales without headcount – the most defensible business model in the automation economy. All financial models and operational metrics are available under NDA upon request.
