

OUR CORE SERVICE OFFERINGS

Services Brochure

— Building digital workforces, not just websites —

Full-Stack Engineering

Next.js · React · TypeScript · FastAPI · PostgreSQL

Autonomous AI Workflows

LLM orchestration · RAG pipelines · MCP systems

Robotic Process Automation

Playwright headless bots at computational speed

Transparent Pricing

Published rates. Free working prototype before any payment commitment.

Engineering-First Culture

The founder writes production code personally on every client project.

Deterministic AI

Strictly typed scaffolding enforced around every probabilistic LLM call.

4+ Years

Engineering Expertise

AI, Web, and Automation systems

3-Second

Demo Response

Live prototype before payment

8 Platforms

Publishing Engine

Single-source omni-channel automation

COMPANY

Logic Intelligence Technologies

FOUNDER

SECTION 01

Enterprise Web Development

At Logic Intelligence Technologies, web development means building high-performance digital platforms — not static brochure sites. We exclusively use React and Next.js with hybrid rendering: Server-Side Rendering for dynamic data and Static Site Generation for lightning-fast load times. Our dark-mode-first UI/UX philosophy produces interfaces that feel enterprise-grade from the first click. Every project is type-safe, accessible, and Lighthouse-90+ optimised before handoff.

INCLUDED IN EVERY WEB BUILD

- ◆ SSR & SSG hybrid rendering for performance and SEO
- ◆ TypeScript-first codebase with strict type safety throughout
- ◆ Tailwind CSS utility-first styling with custom design tokens
- ◆ Supabase Auth — OAuth, Email/Password, and Magic Links
- ◆ Responsive, mobile-first design with full ADA compliance
- ◆ CI/CD deployment via Vercel with GitHub Actions integration

SECTION 02

We transform static software into intelligent decision engines. We do not sell out-of-the-box chatbots — we build custom AI infrastructure embedded deeply into backend services. By supplying LLMs with strict JSON schemas and system prompts, we force AI to return deterministic, programmatic outputs that software can safely execute on. Every AI call has a validation layer, a fallback handler, and an audit trail.

AI INTEGRATION CAPABILITIES

- ◆ **Intelligent Email & Ticket Routing**
LLMs classify, tag, and route incoming messages with structured JSON output — no regex, no keyword matching, no manual triaging.
- ◆ **RAG Pipeline Construction**
Retrieval-Augmented Generation systems ingest company documents and return context-aware, grounded AI responses — not hallucinations.
- ◆ **DOM-Parsing AI Agents**
AI reads live webpage HTML, understands screen context, and navigates multi-step portals autonomously without any hardcoded selectors.
- ◆ **Structured Output Enforcement**
Every LLM call receives a Pydantic schema. If the output does not match, a retry loop fires before returning results to the calling service.

SECTION 03

Robotic Process Automation

Logic Intelligence Technologies pioneers extreme business automation using Python and Playwright. Our headless browser scripts run invisibly on cloud servers, launching virtual browsers that click, scroll, type, and scrape identically to a human user — at computational speed, around the clock. If a workflow requires a human to move data between two screens on a schedule, a LIT automation script should replace that human immediately.

REAL-WORLD ROI METRICS

40 hrs 4 min	Manual data entry replaced by scheduled Playwright scripts.
10,000× Scale	Outbound bots expand capabilities exponentially overnight.
8 Platforms, 1 Trigger	Omni-Channel Publisher handles LinkedIn to WordPress in one command.
Zero Login Fatigue	Bots manage sessions, CAPTCHAs, and retries automatically.

SECTION 04

Database & Cloud Architecture

A beautiful frontend is worthless without a bulletproof backend. We design PostgreSQL databases using Supabase, ensuring absolute data integrity through strict relational schemas. We write custom Row Level Security (RLS) policies directly into the SQL, guaranteeing users can only ever access rows they are authorised to see — a critical requirement for Healthcare, FinTech, and multi-tenant SaaS applications.

DATABASE & DEPLOYMENT STACK

- ◆ **PostgreSQL Schema Design**
Optimal normalisation, foreign keys, and index strategy for high-traffic loads.
- ◆ **Row Level Security (RLS)**
SQL-level user isolation — JWT tokens enforce per-row access permissions.
- ◆ **Supabase Auth & Realtime**
Authentication flows, real-time subscriptions, and edge function deployment.
- ◆ **Vercel + AWS Edge Network**
Global CDN deployment ensuring sub-100ms response times worldwide.
- ◆ **GitHub Actions CI/CD**
Continuous deployment pipelines with environment variable management.

SECTION 05

Pricing Packages

All prices include one round of free revisions. A working prototype is delivered before any payment is requested. Visit [logicintelligencetechnologies.in](#) for more details.

Digital Launch Starting from From ₹8,999 For businesses going digital for the first time. ◆ Custom Next.js landing page or website ◆ Mobile-responsive design — dashboard & admin panel ◆ Supabase PostgreSQL backend & authentication ◆ Domain configuration & SSL provision ◆ 3 months post-launch support & maintenance logicintelligencetechnologies.in	Business Pro Starting from From ₹18,999 For growing companies needing advanced features. ◆ E-commerce or SaaS platform (Stripe integration) ◆ Custom authentication system & user roles ◆ Third-party API integrations (Stripe, Twilio, etc.) ◆ Admin dashboard with real-time analytics ◆ Lighthouse Performance score 90+ logicintelligencetechnologies.in	Enterprise AI Starting from Custom Pricing For enterprises requiring autonomous AI workflows. ◆ Full-stack custom web application ◆ LLM / RAG pipeline integration & prompt engineering ◆ Playwright RPA bot development & deployment ◆ Supabase RLS-secured multi-tenant database ◆ Dedicated retainer support & monitoring logicintelligencetechnologies.in
