

TECHNICAL COMPETENCY & COMPETITIVE DIFFERENTIATORS

Capability Statement

— Rigorous engineering over AI hype —

Full-Stack Engineering

Next.js · React · TypeScript · FastAPI · PostgreSQL

Autonomous AI Workflows

LLM orchestration · RAG pipelines · MCP systems

Robotic Process Automation

Playwright headless bots at computational speed

Transparent Pricing

Published rates. Free working prototype before any payment commitment.

Engineering-First Culture

The founder writes production code personally on every client project.

Deterministic AI

Strictly typed scaffolding enforced around every probabilistic LLM call.

8+

Platforms

Omni-channel autonomous publishing engine

100%

Custom-Built

No templates. Every pixel engineered from scratch.

₹8,999

Starting From

Digital Launch package — live in 4 weeks

SECTION 01

Corporate Overview & Core Data

Company Name	Logic Intelligence Technologies (LIT)
Founder & Tech Lead	Vikash Saravanan
Headquarters	Coimbatore, Tamil Nadu, India
Year Established	2025
Core Focus	AI Engineering, Full-Stack Web, RPA Automation
Primary Tech Stack	React, Next.js, Python, FastAPI, Supabase, Playwright
Website	logicintelligencetechnologies.in
Email	support@logicintelligencetechnologies.in
Phone	+91 93428 77474

CORE COMPETENCIES

- ◆ **Next-Gen Web Architecture**
React/Next.js SaaS apps, dynamic dashboards, and high-performance commercial interfaces with SSR/SSG hybrid rendering.
- ◆ **Python-Based Process Automation**
Playwright web scrapers and RPA scripts for multi-platform synchronisation and headless workflow execution without human intervention.
- ◆ **Backend API Engineering**
Secure, high-throughput FastAPI endpoints with Pydantic validation, rate limiting, and structured error response schemas.
- ◆ **LLM Pipeline Construction**
RAG systems and deterministic AI outputs using strict JSON schemas and prompt engineering with fallback handlers.
- ◆ **Secure Cloud Infrastructure**
Supabase PostgreSQL with Row Level Security (RLS) and edge function deployment on Vercel and AWS global networks.
- ◆ **CI/CD & DevOps Pipelines**
GitHub Actions-integrated Vercel deployments, environment variable management, and automated testing workflows.

SECTION 02

Competitive Differentiators

1

Engineering Rigor over AI Hype

While competitors focus on basic prompt engineering, LIT focuses on systems engineering. We treat AI as a probabilistic component that must be heavily guarded by deterministic scaffolding and strict validation layers. This means structured JSON outputs, typed APIs, and fail-safe error handling on every AI integration — software that works reliably, every time.

2

Playwright RPA Supremacy

Where APIs fail, our headless browser bots succeed. We can automate workflows on legacy systems that our competitors simply cannot interface with, giving us access to enterprise clients whose critical systems predate modern API standards. Our bots handle CAPTCHAs, session management, and dynamic DOM changes with exponential-backoff retry logic.

3

End-to-End Architecture Ownership

We control the entire technology ecosystem. From the secure Supabase database and RLS policies to the ultra-fast Vercel edge deployment. This vertical ownership enables faster debugging, tighter security, superior margins, and a single point of accountability for every client engagement.

PAST PERFORMANCE & TECHNICAL PORTFOLIO

OpenEnv-Debugger

Meta PyTorch Hackathon

Python CLI tool using AI to parse error logs and autonomously resolve PyTorch environment conflicts for ML engineers worldwide.

HearWise Child Health

Healthcare Full-Stack Platform

Secure Next.js/Supabase health application with complex RLS policies protecting pediatric data across multiple user roles.

Omni-Apply RPA

Autonomous Bot Architecture

DOM-scraping Playwright bot with LLM API integration for autonomous web portal navigation and intelligent form completion at scale.

"We treat AI as a component, not a solution — the system architecture is the product."

Vikash Saravanan, Founder & Lead Engineer · logicintelligencetechnologies.in
