LOGIC INTELLIGENCE TECHNOLOGIES

BEFORE YOU BEGIN

Thank you for choosing LIT

This guide explains what happens after you sign, what access and information we need, and how we keep your systems secure. Most clients complete onboarding in a single sitting. If anything is unclear, reply to the welcome email and we will walk you through it.

SECURITY NOTICE

Never send passwords, API keys, private keys, database passwords or authentication tokens by email or through the standard onboarding form. LIT will request delegated team / member access wherever supported. If someone asks you for a password on behalf of LIT, contact us before responding.

01 What Happens Next

02 Technical Onboarding

Once we have access, LIT sets up the working environment for your project:

- ◆ A private source-code repository under your organization, or transferred to you at handover.
- ◆ Separate development, preview and production environments so changes are tested before going live.
- ◆ A project tracker and a shared channel for questions and approvals.
- ◆ An access register recording every account LIT has been granted, used again at handover to revoke access.

03 Information We Need

ITEM	WHY WE NEED IT	FORMAT
Business details	Legal name, address and contacts for documents and invoices	Onboarding form
Brand assets	Logo, colours, fonts and imagery for the interface	SVG / PNG, brand guide
Content	Page copy, product data, FAQs	Docs, spreadsheets
Existing systems	Current website, tools and data sources we connect to	Links, exports
Users & roles	Who uses the system and what each role can do	Onboarding form
Integrations	Payment, email, SMS, CRM or AI services required	Provider names
Compliance needs	Any regulatory or internal policies we must follow	Policy documents

LOGIC INTELLIGENCE TECHNOLOGIES

04 GitHub Access

- 1 Create or confirm a GitHub organization for your company (recommended), or use an existing one.
- 2 Invite the LIT GitHub account provided in your welcome email as a member or outside collaborator.
- 3 Grant write access only to the project repositories. Admin access is not required.
- 4 Never share personal access tokens or SSH private keys.

05 Domain / DNS Access

We need to add records (for example A, CNAME and TXT) to point your domain to the application and to verify email services. Choose one option:

- ◆ Delegated access: invite LIT as a user at your registrar or DNS provider (e.g. Cloudflare member) where supported.
- ◆ Assisted change: LIT sends you the exact records and you add them yourself; we verify once they propagate.

06 Cloud Access

If your project uses Google Cloud, AWS or Azure, invite LIT through the provider's identity and access management (IAM) with a role limited to the project resources. Billing ownership stays with you.

07 Supabase Access

- ◆ Invite LIT to your Supabase organization with the Developer role.
- ◆ Do not send the service-role key or database password — LIT works through the dashboard and the CLI with its own account.
- ◆ Row-level security is enabled on all tables we create.

08 Vercel Access

- ◆ Invite LIT to your Vercel team as a Member, or allow LIT to build under its team and transfer the project to you at handover.
- ◆ Environment variables are entered directly in Vercel, never shared in chat or email.

LOGIC INTELLIGENCE TECHNOLOGIES

09 Third-Party Integrations

For payment gateways, email and SMS providers, WhatsApp, analytics and AI services, invite LIT as a team member where the provider supports it. If a provider only issues API keys, you add the key directly to the project's environment variables in Vercel or Supabase — LIT will show you exactly where during a short call.

10 Security Rules

- ◆ No passwords, keys or tokens over email, chat or the onboarding form.
- ◆ Least privilege: LIT requests only the access the project needs.
- ◆ Multi-factor authentication is recommended on every account you own.
- ◆ Secrets live only in environment variables or secret managers, never in source code.
- ◆ At handover, LIT's access is removed and any shared credentials are rotated.

11 Communication

CHANNEL	USED FOR	DETAILS
Email	Formal approvals, documents, invoices	support@logicintelligencetechnologies.in
Phone	Urgent issues	+91 93428 77474
Project channel	Day-to-day questions	
Status update	Progress, risks, next steps	----- written summary
Review meetings	Demos and approvals	

12 Project Delivery Process

LOGIC INTELLIGENCE TECHNOLOGIES

13

Support

After launch, defects in the delivered scope are fixed during the warranty period stated in your SOW. Ongoing maintenance is available through a Maintenance & Support Agreement. To report an issue, email support@logicintelligencetechnologies.in with the subject "_____ – short summary" and include steps to reproduce, screenshots and the time it occurred.

ONBOARDING CHECKLIST

- | | |
|--|---|
| ☐ Onboarding form completed | ☐ Brand assets shared |
| ☐ GitHub access granted | ☐ Domain / DNS option chosen |
| ☐ Supabase invitation sent | ☐ Vercel invitation sent |
| ☐ Integration accounts listed | ☐ Kick-off meeting booked |
