

OPERATIONAL INTELLIGENCE AUDIT & DIAGNOSTIC ROADMAP

AI Readiness Assessment

– Diagnose, map, and roadmap your AI integration –

Full-Stack Engineering

Next.js · React · TypeScript · FastAPI · PostgreSQL

Autonomous AI Workflows

LLM orchestration · RAG pipelines · MCP systems

Robotic Process Automation

Playwright headless bots at computational speed

Transparent Pricing

Published rates. Free working prototype before any payment commitment.

Engineering-First Culture

The founder writes production code personally on every client project.

Deterministic AI

Strictly typed scaffolding enforced around every probabilistic LLM call.

8+

Platforms

Omni-channel autonomous publishing engine

100%

Custom-Built

No templates. Every pixel engineered from scratch.

₹8,999

Starting From

Digital Launch package – live in 4 weeks

SECTION 01

Infrastructure & Data Health Audit

- [5.1.A]** **Where does your critical business data currently reside?**

Cloud SQL database, Excel or CSV files, legacy on-premise servers, or third-party SaaS platforms like Salesforce, HubSpot, or Zoho? The answer directly determines the integration architecture LIT will design.
- [5.1.B]** **How structured and clean is your operational data?**

Is it neatly categorised in relational databases, or trapped in unstructured formats like PDF invoices, email chains, and Word documents? Unstructured data requires LLM parsing layers before automation pipelines are possible.
- [5.1.C]** **Do your current platforms offer API access or Webhooks?**

This determines whether LIT can connect AI natively via REST API, or whether Playwright headless RPA bots are required to scrape data directly from the user interface of your legacy systems.
- [5.1.D]** **What is your current monthly SaaS and cloud tool spend?**

Identify redundant SaaS subscriptions that a custom LIT platform can eliminate. Most enterprise clients reduce third-party tool costs by 30-40% after a custom platform deployment replaces fragmented point solutions.

OPERATIONAL BOTTLENECK IDENTIFICATION

- Top Manual Data Processes**

Identify workflows where staff manually move data between two screens. These are the highest-priority automation targets for LIT.
- Weekly Hours on Repetitive Tasks**

How many hours are spent generating standard reports, drafting routine emails, or answering repetitive client enquiries every week?
- Customer Onboarding Friction**

Where does the prospect wait longest? This is your first RAG pipeline or AI routing candidate with the most visible impact.
- Operational Scaling Bottleneck**

If your operational volume doubled tomorrow, which team breaks first? That is your Tier 1 automation target — address it before scaling.

SECTION 02

AI Use-Case Mapping & LIT Diagnostic Roadmap

SELECT THE AI SOLUTIONS WITH HIGHEST IMMEDIATE ROI FOR YOUR ORGANISATION

☐ **Automated Document Parsing**
Extracting structured JSON from PDFs, emails, and invoices using strict LLM schemas.

☐ **Context-Aware Customer Support**
AI agent ingesting company docs to draft on-brand replies to client enquiries.

☐ **Autonomous Lead Generation**
Headless bots scraping verified directories and populating your CRM automatically.

☐ **Dynamic Content Publishing**
Omni-channel automation publishing tailored content to 8 platforms from one source.

☐ **Predictive Inventory Management**
ML forecasting engines analysing sales data and triggering automated reorders.

☐ **Intelligent Document Classification**
AI-powered intake routing documents, applications, and requests to correct workflows.

THE LIT DIAGNOSTIC ROADMAP

Tier 1
Immediate Wins
Low integration friction, high ROI automation scripts deliverable in 2-4 weeks.
Typically headless RPA bots and simple LLM routing layers.
CONTACT & ENGAGEMENT

Website
logicintelligencetechnologies.in

Email
support@logicintelligencetechnologies.in

Tier 2
System Upgrades
Database migrations, API integrations, and RAG pipelines. 4-8 week engagements delivering long-term infrastructure value and MRR opportunities.

Phone
+91 8448 7174

Tier 3
Autonomous Enterprise
Full-scale custom software architectures where AI acts as the primary operational engine. 3-4 month multi-phase builds for enterprise clients.

Location
Coimbatore, Tamil Nadu, India
