SECTION 11.1

Corporate Biography

Logic Intelligence Technologies (LIT) is a specialised AI engineering and software development agency founded in 2025 and headquartered in Coimbatore, Tamil Nadu, India. LIT was built to address a critical flaw in the modern technology industry: the over-reliance on superficial AI chatbots and brittle prompt engineering wrappers that break in production. We are systems engineers. We build full-stack web applications, headless robotic process automation bots, and deeply integrated AI decision engines. By utilising frameworks including Next.js, Python, Playwright, and Supabase, we architect digital ecosystems that operate autonomously — from secure healthcare databases to dynamic web-scraping agents and multi-platform content publishing engines. Logic Intelligence Technologies delivers uncompromising, high-performance software for enterprises ready to scale without friction. Website: logicintelligencetechnologies.in

SECTION 11.2

VIKASH SARAVANAN

Founder & Lead Engineer — Logic Intelligence Technologies

B.Tech AI & Data Science · Rathinam Technical Campus, Coimbatore, Tamil Nadu

Vikash Saravanan bridges the gap between high-level academic AI theory and ruthless commercial software execution. His engineering portfolio is highlighted by his leadership in the Meta PyTorch Hackathon where he developed OpenEnv-Debugger — a Python AI tool for ML environment conflict resolution. He is also the chief architect of HearWise Child Health, a secure full-stack Next.js and Supabase healthcare platform. Vikash is fiercely passionate about deterministic architecture, dark-mode UI precision, and the future of autonomous digital workflows. Every LIT client project receives direct, hands-on engineering oversight from the founder himself from day one to deployment.

SECTION 11.3

Strict Brand & Visual Guidelines

Primary Aesthetic

The Dark-Mode Standard. Interfaces must feel like a high-end IDE — deep navy backgrounds (#0D1B3E), precise typography, and cyan (#45D9D2) accents.

Primary Background Colour

Deep Navy — Hex: #0D1B3E. Never use flat white, pastel, or gradient backgrounds in LIT marketing materials or client-facing documents.

Accent Colour

Electric Cyan — Hex: #45D9D2. Used for CTAs, active links, terminal-style highlights, and brand emphasis. Never overused — maximum 20% of any design.

Typography Headings

Space Grotesk or Inter — clean geometric sans-serif. Bold weight for display headings. Never use script or decorative fonts in LIT communications.

Typography Technical

JetBrains Mono or Fira Code — monospaced fonts for all code blocks, terminal outputs, and technical data displays in documentation and social media.

Logo Usage Rules

High-resolution SVG only. Maintain clear space equal to 50% of logo height on all sides. Never distort proportions, recolour, or apply visual effects.

MEDIA Q&A — INTERVIEW BOILERPLATES

Why choose LIT over a traditional web design agency?

Traditional agencies build digital brochures. LIT builds digital workforces. We engineer the backend databases, API connections, and Python automation scripts that allow software to make decisions and do the work of human employees — autonomously, around the clock, without error or fatigue.

What makes LIT's AI approach different from other AI agencies?

We treat AI as a controlled, probabilistic component within a strictly typed deterministic system. We never build AI without a validation layer, a structured output schema, and a fallback handler. That engineering discipline is our moat.

Where can journalists and media find more information?

All case studies, technical documentation, and service specifications are available at logicintelligencetechnologies.in. Media enquiries can be directed to support@logicintelligencetechnologies.in.
