EXECUTIVE SUMMARY

Thank you for the opportunity to partner with your team. Following our technical discovery sessions, Logic Intelligence Technologies has engineered a comprehensive strategy to resolve your operational bottlenecks. You do not just need a website — you need a robust, AI-integrated software architecture. This proposal outlines our approach to building a secure, high-performance platform using Next.js, Supabase PostgreSQL, and advanced LLM orchestration, fully tailored to your specific operational requirements and budget constraints.

SECTION 01

THE CURRENT BOTTLENECK

[Client company] is constrained by legacy software interfaces and highly manual data entry workflows. This results in high labour costs, data entry errors, slow response times, and an inability to scale operations without proportionally increasing headcount and introducing further human error risk.

THE LIT SOLUTION

LIT will architect a centralised, autonomous digital ecosystem. Next.js guarantees a premium user experience. Supabase PostgreSQL ensures absolute data integrity. Custom Python automation scripts and AI decision engines eliminate the manual workflows currently choking your operational throughput.

SECTION 02

Comprehensive Scope of Work

Custom UI/UX Engineering

- 1

Design and frontend development of a modern, responsive web application adhering to strict accessibility standards and the LIT dark-mode aesthetic.
- 2

Full-Stack Development

Next.js frontend and secure FastAPI backend API endpoints with TypeScript typing, Pydantic validation, and structured error response schemas.
- 3

Database Architecture

Supabase PostgreSQL schema design with RLS implementation, ER documentation, and performance-optimised indexing strategy for the expected data volume.
- 4

AI & RPA Integration

Custom LLM prompts with JSON schema enforcement and Playwright automation scripts tailored precisely to your specific workflow requirements.
- 5

Deployment & CI/CD Configuration

End-to-end cloud infrastructure setup on Vercel and AWS, domain routing, SSL provisioning, environment variable management, and GitHub Actions pipelines.

SECTION 03

Project Timeline & Milestones

Weeks 1–2 Discovery, UI/UX Design, and Database Schema mapping MILESTONE Signed design approval and technical blueprint	Weeks 3–5 Core Full-Stack Development and Auth implementation MILESTONE Functional staging link delivered	Weeks 6–7 AI Integration, RPA scripting, and API connections MILESTONE Autonomous data processing active	Week 8 QA Testing, Security Audit, and Final Deployment MILESTONE Official Go-Live announced
--	--	---	---

*Timelines are contingent on prompt client feedback and asset delivery.

SECTION 04

TOTAL PROJECT INVESTMENT

Custom Quoted — Transparent & Itemised

Every invoice is itemised. No hidden fees. A free working prototype is delivered before the initial deposit is requested.

30% Initial Deposit	40% Midpoint Payment	30% Final Payment
--	---	--

This proposal is valid for 14 days from issue date.

Commences Discovery and Design Phase immediately

Upon delivery of functional staging environment

Upon successful QA, IP transfer, and deployment
