

FOUR-PHASE ENGINEERING LIFECYCLE

Technology Roadmap Template

— Blueprint to autonomous enterprise in 4 months —

Full-Stack Engineering

Next.js · React · TypeScript · FastAPI · PostgreSQL

Autonomous AI Workflows

LLM orchestration · RAG pipelines · MCP systems

Robotic Process Automation

Playwright headless bots at computational speed

Transparent Pricing

Published rates. Free working prototype before any payment commitment.

Engineering-First Culture

The founder writes production code personally on every client project.

Deterministic AI

Strictly typed scaffolding enforced around every probabilistic LLM call.

8+

Platforms

Omni-channel autonomous publishing engine

100%

Custom-Built

No templates. Every pixel engineered from scratch.

₹8,999

Starting From

Digital Launch package — live in 4 weeks

Phase 01

Architectural Foundation

Blueprints, UI/UX, and Database Schemas — no production code before the foundation is locked.

- Complete wireframes and high-fidelity Figma designs with dark-mode aesthetic
- PostgreSQL Database Schema map with full ER diagram and relationship documentation
- Supabase project initialisation and initial Row Level Security policy drafting
- Next.js repository creation with Tailwind CSS, TypeScript, and ESLint configuration
- API Contract documentation — exact JSON structures for frontend/backend handshake
- Client approval gate: visual design and technical blueprint signed before Phase 2
- Tech stack confirmation — all third-party API keys and credentials collected

MILESTONE: Client approval of design and blueprint. Phase 2 cannot begin without this.

Visit logicintelligencetechnologies.in to request a project scoping session.

Phase 02

Core Engineering

Authentication, CRUD APIs, and database integration. Real software, real data.

- Supabase Auth implementation — Login, Registration, Password Reset, JWT management
- FastAPI or Node.js backend endpoint construction with Pydantic validation layer
- Next.js frontend state management, API integration, and loading state handling
- Core user dashboard and data-table interfaces with real-time Supabase subscriptions
- Row Level Security policies tested and verified against all defined user roles
- Admin panel construction with role-based access control and audit logging
- Email notification integration via SendGrid or Resend for transactional flows

MILESTONE: Functional staging link where stakeholders log in and view dynamic data.

Visit logicintelligencetechnologies.in to request a project scoping session.

Phase 03

AI Orchestration

LLM integration, RPA scripts, and third-party API connections.

- Integration of Claude, Grok, or OpenAI APIs via secure backend routes with logging
- System prompt engineering with JSON schema enforcement and Pydantic validation
- Playwright cron job development for headless automation of scheduled workflows
- Stripe payment integration with webhook handlers for subscription management
- RAG pipeline construction — document ingestion, embeddings, and retrieval layer
- Twilio or WhatsApp Business API integration for automated notification flows
- Multi-tenant data isolation testing — confirm no cross-tenant data leakage

MILESTONE: Platform autonomously processes data and triggers AI-powered automations.

Visit logicintelligencetechnologies.in to request a project scoping session.

Phase 04

Hardening & Deployment

QA, security audit, performance optimisation, and go-live.

- Penetration testing — SQL injection, JWT forgery, cross-tenant RLS audit
- Edge-case testing — API timeouts, malformed data inputs, concurrent write conflicts
- Lighthouse performance optimisation — WebP images, SSR caching, lazy loading
- Final deployment to Vercel (frontend) and cloud servers (backend, cron jobs)
- Domain configuration, SSL provisioning, DNS verification, and CDN configuration
- Analytics and event tracking setup with conversion goal configuration
- Client walkthrough, admin credentials handover, and system documentation delivery

MILESTONE: Official Go-Live. IP transfer upon final payment receipt.
