

AUTONOMOUS INTELLIGENT SYSTEMS

AI & RPA Capabilities

— Self-operating pipelines. Deterministic AI. —

Full-Stack Engineering

Next.js · React · TypeScript · FastAPI
· PostgreSQL

Autonomous AI Workflows

LLM orchestration · RAG pipelines ·
Playwright RPA

Robotic Process Automation

Headless bots · 24/7 execution ·
legacy systems

Transparent Pricing

Published rates. Free prototype
before any payment.

Engineering-First

The founder writes production
code on every project.

Deterministic AI

Strict JSON scaffolding on every
LLM integration.

8+

Platforms

Omni-channel publishing

100%

Custom-Built

No templates. Ever.

CORE SERVICES

Full-Stack Web Apps

AI & LLM Integration

Robotic Process Automation

PostgreSQL & Supabase

CI/CD & DevOps

E-Commerce Platforms

RAG Pipelines

API Engineering

SECTION 01

AI Engineering Architecture

Logic Intelligence Technologies builds AI as a precision instrument — not a magic box. Every Large Language Model call is wrapped in strict JSON schema enforcement, Pydantic validation, and multi-level retry logic. Our AI systems are auditable, testable, and deterministic by design. We integrate Claude, Grok, and OpenAI models with custom-engineered orchestration layers that guarantee structured, reliable output every time.

THE LIT AI STACK

Orchestration Layer

Python service managing API calls, context, retry logic and cost tracking

Validation Layer

Pydantic schemas enforce output structure. Malformed responses trigger retries

Prompt Engineering

Deterministic system prompts + dynamic user prompts. JSON mode for structured output

RAG Pipeline

pgvector embeddings in Supabase. Semantic search with cosine similarity.

Audit Trail

Every LLM call logged with input, output, latency, cost, validation status.

SECTION 02

CLASSIFICATION & ROUTING

LLMs classify incoming data (emails, tickets, sensor events) into structured JSON categories. Each category routes to a different downstream service. Zero human triage required.

CONTENT GENERATION

Template-driven generation with strict JSON output schemas. Brand voice enforced via system prompts. Every output passes a determinism check before publishing.

CONTEXT-AWARE DECISIONS

RAG pipeline retrieve relevant documents from Supabase pgvector store. LLM generates decisions grounded in company data, not hallucinated inference.

DOM-PARSING AI AGENTS

AI reads live HTML from web portals and navigates them autonomously. Playwright bots act on AI decisions in real time. Fully automated end-to-end portal workflows.

SECTION 03

SECTION 04

Robotic Process AutomationRAG & Vector Systems

Playwright-powered bots execute browser actions at computational speed, 24/7. Our RPA systems handle authentication, CAPTCHA bypass coordination, session management, and parallel execution via Python asyncio. Every bot is stateless, retry-safe, and deployable to cloud infrastructure with a single command.

AUTOMATION PORTFOLIO

- ◆ **Omni-Apply Job Bot**
Playwright bot fills and submits job applications on Naukri, LinkedIn, Indeed, and Internshala simultaneously. One trigger applies to 100 portals.
- ◆ **Content Publisher Engine**
Python async bot publishes formatted posts to 8 platforms from one API trigger: Instagram, LinkedIn, X, Facebook, Telegram, Threads, Discord, Website.
- ◆ **Data Harvest Pipelines**
Scheduled scrapers extract structured data from competitor sites, job boards, and market feeds into Supabase tables for analytics.
- ◆ **Form Automation Systems**
AI + Playwright combination reads portal interfaces and autonomously fills multi-step government and enterprise forms.

Retrieval-Augmented Generation grounds LLM responses in your proprietary data. We build pgvector Supabase stores, automated document ingestion pipelines, and context-aware retrieval that makes AI answers factual, auditable, and brand-accurate.

RAG ARCHITECTURE

1. Ingestion

Documents parsed (PDF, DOCX, HTML). Chunked to 512 tokens with 64-token overlap.

2. Embedding

OpenAI text-embedding-3-small generates 1536-dimension vectors stored in pgvector.

3. Retrieval

User query embedded live. Cosine similarity search returns top-k relevant chunks.

4. Augmentation

Retrieved context injected into LLM prompt. Response grounded in source material.

5. Validation

Pydantic validates structure. Source citations included in every response.

SECTION 05

Delivery Framework

Every AI/RPA engagement follows our structured delivery process — from scope definition to autonomous production deployment.

1

Discovery

Week 1

Technical requirements, data audit, integration mapping, success metric definition.

2

Prototype

Weeks 2-3

Functional demo on staging. AI pipeline wired. Bot flow validated on target portal.

3

Integration

Week 4

Supabase schema, RLS policies, API endpoints, authentication. Full system integration.

4

Hardening

Week 5

Error handling, retry logic, edge cases, performance tuning, monitoring dashboards.

5

Deployment

Week 6

Cloud deployment (Vercel/AWS), CI/CD pipeline, runbook handoff, 30-day hypercare.
