RAG Pipelines

API Engineering

SECTION 01

Process Questions

Q: Do you really build a free prototype before payment?

Yes. A functional staging prototype is built before any payment beyond the initial discovery session. You click through real pages, test real flows, and see real data — not a Figma mockup. If you are not satisfied after seeing the prototype, you owe nothing. This is our policy for every engagement.

Q: Who actually writes the code?

Vikash Saravanan personally writes every line of code on every project. There are no junior developers, no outsourcing partners, no freelance subcontractors. This is not a scalability strategy — it is an intentional quality commitment. Every client gets founder-level engineering.

Q: How long does a typical project take?

A standard full-stack web application with auth, database, and API integrations: 4–6 weeks. An AI/RPA pipeline engagement: 5–8 weeks. A standalone landing page or brochure site: 1–2 weeks. Complex enterprise systems: scoped individually. Timeline confirmed in writing before work begins.

Q: What happens if the project runs over scope?

Out-of-scope features are never added without a written scope amendment and your explicit approval. The original scope contract defines what is included. Additional features are priced transparently before implementation begins. No surprise invoices.

Q: Can I see your previous work?

Yes. Portfolio at logicintelligencetechnologies.in/portfolio. Key projects: OpenEnv-Debugger (Meta Hackathon, GitHub public), HearWise Child Health (live production), and Omni-Apply RPA (demo available on request). Case study PDFs available on the website.

Q: Do you sign NDAs?

Yes. NDAs are standard practice for enterprise engagements. A template NDA is available and can be signed before any technical discovery session begins.

SECTION 02

Technical Questions

Q: What tech stack do you use and why?

Next.js (SSR/SSG, performance, SEO), TypeScript (type safety, reduced runtime errors), Supabase (PostgreSQL + RLS + Auth), FastAPI (async Python, OpenAPI docs, Pydantic), Vercel (edge network, CI/CD). Every choice is made for engineering correctness, not trend.

Q: Do you use AI to write client code?

AI assists with boilerplate and reference lookups. Every line of production client code is reviewed, understood, and signed off by Vikash personally. AI-generated code that is not understood is not merged. Deterministic, testable, type-checked code is the standard.

Q: What is Row Level Security and why does it matter?

RLS is a PostgreSQL feature that filters database rows based on the authenticated user. It is enforced at the database engine level — no application bypass is possible. For any app storing user data, RLS is the only responsible security architecture.

Q: Can you integrate with our existing systems?

Yes. REST and GraphQL API integrations, webhook handling, third-party auth (Google, GitHub, custom SAML), Stripe, Razorpay, Twilio, WhatsApp Business API, and custom legacy system connectors via FastAPI middleware.

Q: What is the minimum engagement size?

The Digital Launch Package starts from ₹8,999. No engagement is too small if the scope is clear and the project is interesting. Contact via logicintelligencetechnologies.in to discuss.

Q: Do you offer monthly retainer support?

Yes. Monthly retainer packages from ₹6,000/month cover ongoing bug fixes, feature additions, monitoring, and priority response SLA. Retainer clients receive priority scheduling over new project enquiries.
