

VIKASH SARAIVANAN — ENGINEER, ARCHITECT, FOUNDER

Founder Profile

— Founder-coded. No intermediaries. —

Full-Stack Engineering

Next.js · React · TypeScript · FastAPI
· PostgreSQL

Autonomous AI Workflows

LLM orchestration · RAG pipelines ·
Playwright RPA

Robotic Process Automation

Headless bots · 24/7 execution ·
legacy systems

Transparent Pricing

Published rates. Free prototype
before any payment.

Engineering-First

The founder writes production
code on every project.

Deterministic AI

Strict JSON scaffolding on every
LLM integration.

8+

Platforms

Omni-channel publishing

100%

Custom-Built

No templates. Ever.

COMPANY

Logic Intelligence Technologies

FOUNDER

Vikash Saravanan

LOCATION

Coimbatore, Tamil Nadu, India

WEBSITE

logicintelligencetechnologies.in

“Where Logic Meets Innovation” — every system we architect, every line we deploy.

Visit logicintelligencetechnologies.in to explore services, case studies, and pricing packages.

CORE SERVICES

Full-Stack Web Apps

AI & LLM Integration

Robotic Process Automation

PostgreSQL & Supabase

CI/CD & DevOps

E-Commerce Platforms

RAG Pipelines

API Engineering

SECTION 01

Biography

VIKASH SARAVANAN

Founder & Lead Engineer

Logic Intelligence Technologies

Vikash Saravanan is the founder and sole lead engineer of Logic Intelligence Technologies. He engineers every client project personally — no junior developers, no outsourcing, no project managers between the client and the code. This is by design: every system that leaves LIT is built to the standard that only direct ownership produces.

His work spans full-stack Next.js applications, autonomous AI orchestration pipelines, Playwright RPA systems, and Supabase PostgreSQL architecture with Row Level Security. He has submitted work to the Meta PyTorch Global Hackathon and delivered production systems used by real clients across healthcare, e-commerce, and enterprise operations.

ENGINEERING PHILOSOPHY

- ◆ AI is a controlled component inside a deterministic typed architecture — never a black box.
- ◆ Free prototype before payment is not a marketing tactic — it is the minimum standard of professional integrity.
- ◆ Every line of client code must pass strict TypeScript, Pydantic validation, and Lighthouse 90+ before handoff.
- ◆ RLS at the database layer is non-negotiable for any application handling user data.

SECTION 02

Engineering Portfolio

◆ **OpenEnv-Debugger**

AI Engineering · Meta PyTorch Hackathon

Python CLI tool using Claude AI with JSON schema enforcement and Pydantic validation to diagnose and resolve PyTorch environment conflicts. Demonstrates deterministic AI engineering principles: structured output, typed validation, retry logic.

◆ **HearWise Child Health**

Full-Stack Healthcare SaaS · Live in Production

Next.js 15 + Supabase paediatric health platform with complex RLS policies, custom auth flows, and Lighthouse 96 score. Enterprise-grade security architecture: SQL-level user data isolation that cannot be bypassed at the application layer.

◆ **Omni-Apply RPA Bot**

Autonomous RPA · Python asyncio · Playwright

Parallel Playwright bots submitting job applications to 100+ portals simultaneously. LLM reads portal HTML and maps fields to user profile. DOM-parsing AI + asyncio concurrency reduces 40 hours of manual work to under 4 minutes.
