

Enterprise Digital Transformation Case Study

High-Throughput Workflow Engineering & Architecture Case Study

Logic Intelligence Technologies â Official Corporate Publication

1. The Engineering Challenge

A fragmented workflow ecosystem suffering from manual data synchronization errors, slow page loads, and vulnerable database endpoints.

2. The Implemented Solution

Engineered an event-driven Next.js App Router platform backed by PostgreSQL with strict RLS policies, real-time lead ingestion, and automated follow-ups.

3. Verified Architecture Outcomes

- 100% server-side authorization enforcement. - Zero unauthorized data leakage in cross-tenant isolation tests. - Sub-second median response times across all customer touchpoints.
