

Corporate Capability Profile

Logic Intelligence Technologies â Executive Capabilities & Architecture Overview

Logic Intelligence Technologies â Official Corporate Publication

1. Executive Summary

Logic Intelligence Technologies is a specialized enterprise technology and engineering firm delivering high-performance full-stack web platforms, deterministic workflow automation, and production-grade AI systems. Founded and led by Vikash Saravanan, our systems are engineered with mathematical precision, strict schema validations, and enterprise security guarantees.

2. Core Capabilities

- Scalable Cloud Architectures: Microservices, Next.js App Router, edge computing, distributed relational databases (PostgreSQL/Supabase).
- Intelligent Automation: Headless browser automation (Playwright/Python), deterministic robotic process automation, and multi-system synchronization.
- AI Engineering & Orchestration: Domain-specific RAG systems, schema-enforced LLM integrations, and context-bounded generative assistants.

3. Quality & Verification Standards

Every system engineered by Logic Intelligence Technologies undergoes automated end-to-end testing, static type verification, strict Row Level Security (RLS) enforcement, and WCAG accessibility compliance.
